Computer Science student with hands-on experience building backend services and small applications in Python, Java, and C#. Comfortable across the stack from FastAPI backends to game logic and UI and eager to bring that range to a professional engineering team.

EDUCATION

BSc in Computer Science — Eötvös Loránd University, Hungary

2024 – Present (Expected July 2027)

Relevant coursework: Algorithms & Data Structures, Web Programming, Object-Oriented Programming, Imperative & Functional Programming, GUI Programming, Machine Learning & Artificial Intelligence, Software Development, Databases, Multi-Process Programming, Cybersecurity Basic.

PROJECTS

Project Poseidon — Distributed Maritime Vessel Traffic Monitor *Python, FastAPI*

Built an enterprise-style backend server acting as a central hub for a fleet-tracking system covering the North Sea and Baltic. Designed a REST API with FastAPI and visualized data with Plotly to serve real-time vessel data to client applications.

VIA — Transport Tycoon Simulation

Java

Developed a mini transport-tycoon simulation game as part of the 2025/2026 Spring Software Technology practicum. Contributed to architectural design and documentation alongside implementation.

Metros of Budapest — Strategic Map-Building Game

JavaScript

Built a card-driven strategy game where players design metro lines across Budapest, connecting districts and crossing the Danube. Implemented game logic and interactive map mechanics in vanilla JavaScript.

Additional projects (*Flappy Bird*, *Labyrinth*, and more) available on [GitHub](https://github.com).

PROFESSIONAL EXPERIENCE

Python Mentorship Program — Symphony.is

Sarajevo, Bosnia and Herzegovina • Summer 2023

Completed an intensive mentorship program focused on Python programming fundamentals. Worked on problem-solving tasks to strengthen programming logic. Gained exposure to both foundational and advanced programming concepts.

CERTIFICATIONS

Software Development Certification — ITAcademy by LINKgroup. Covered C#, Java, HTML/CSS/JavaScript, and SQL, with foundational training in web development and object-oriented programming.

HONORS & AWARDS

Stipendium Hungaricum Scholarship — Hungarian Ministry of Education (Sep 2024). Government funded, merit-based scholarship supporting international students pursuing studies in Hungary.

SKILLS

Languages: C, C#, Java, Python, PHP, JavaScript, Haskell, ADA, SQL, HTML/CSS

Frameworks & Libraries: FastAPI, Spring, Bootstrap, Swing, LibGDX, Pandas, JUnit, Plotly

Tools & Platforms: Git, Linux, GitLab, GitHub

Languages Spoken: Bosnian (Native), Serbian (Native), English (Fluent, FCE B2), Croatian (Fluent), Hungarian (Basic), German (Basic)
